Discussion

On Monday, 11/25/02, Tom Lindsay, SSOC, spoke with Carl Spreng of CDPHE regarding 207C pond decontamination requirements and characterization data. Envirocon Inc. worked over the past weekend in removing any potential remaining sludges and sediments from C pond. The material removed was primarily the weathered layer of asphalt from the liner material. CDPHE agreed the project could go forward in peeling the inside liner and pushing the berms into C pond if we took additional characterization of the liner material and soil beneath the liner to supplement existing data. It was agreed to take one liner and one soil sample each at the NE and SE corners of C pond. Previous data that was collected from C pond was primarily taken on the west and southwest sides of C pond. The project will move forward with this agreement.
